

Guidelines for Customs System in MS Edge:

Objective

Enable Microsoft Edge browser to browse Customs Systems as Microsoft is bringing IE 11 to EOL by 15 June 2022 for Windows 10 users.

Pre-requisites to enable IE mode in Edge:

User machines need to be updated to one of the below Windows 10 versions and its related windows update mentioned or above and the Edge browser version should be 92 or above

1. Windows updates
 - o Windows 11
 - o Windows 10, version 1909 - [KB5003974](#) and [KB5003698](#) or later
 - o Windows 10, version 2004; Windows 10, version 20H2 and Windows 10, version 21H2 - [KB5005260](#) and [KB5005101](#) or later
2. Microsoft Edge version 92 (92.0.902.55 or later)

Impacts:

There are no impacts to the users in the behavior of the application expected when using the IE mode of Edge browser as it is using the same IE 11 internally.

Explicit disabling of MS IE 11 is far sighted and it is not part of this process. Customs Systems can be browsed using IE 11 as long as it is supported.

Configuration required for using the Customs System in Edge

User may adopt any one of the methods based on the environment

A. Local configuration – Registry Update

To Open Customs System in Edge, Computers' system administrator can update the settings through Local Policy or registry changes (**Local configuration**).

Pic 1

As shown in the above picture, cs.kgac.gov.kw is opened in Edge – IE Mode.

B. Group Policy configuration

1. If the policy is applied through group policy, it will refer to a local file or shared file in any web location in XML format. It will show in group policy on the computer or user level and the browser will reflect the settings as below

<edge://compat/iediagnostic> as in Pic 2

The screenshot shows the 'Internet Explorer mode diagnostics' settings page. On the left, a navigation pane lists: User agent overrides, CDM overrides, Enterprise Mode Site List, Internet Explorer mode diagnostics (highlighted), and Enterprise Site List Manager. The main content area is titled 'Group policy settings' and shows a list of settings:

Setting	Value
Group policy settings	On
Use the Enterprise Mode IE website list (IE policy)	
Configure the Enterprise Mode Site List (Edge policy)	https://cs.kgac.gov.kw/Downloads/csSites.xml
Site list debug registry key	Not set
Configure the Enterprise Mode Cloud Site List	Not set
Cloud site list debug registry key	Not set
Send all intranet sites to Internet Explorer	Not configured
Save Target As policy	Not configured
Turn off InPrivate Browsing	Not configured

Below this list, the 'Effective site list source' is 'Configure the Enterprise Mode Site List (Edge policy)' and the 'Effective site list URL' is <https://cs.kgac.gov.kw/Downloads/csSites.xml>.

Pic 2

And more details can be viewed at <edge://compat/enterprise> like list of all the URL's that are configured to browse in IE Mode from csSites.xml
